

Automated Barrier Arms

We offer a wide range of automated barrier arms to help manage vehicle access to your property. Models are available up to 8m long to suit large industrial and commercial sites, right through to short 4m and articulated barriers for car park applications. All are high quality fast European made products that are capable of continuous operation.

Choose The Right Barrier Arm For Your Job

Automated barrier arm systems make it easier to manage the vehicle traffic flow in and out of your property and restrict access to unauthorised vehicles, providing enhanced security and peace of mind.

Hampden will help you determine the exact model that best suits your property needs, depending on the size of your entrance, the level of usage and your budget. We have models that are ideal for midsize business premises, through to heavy-duty models and units specifically made for continuous duty car parking applications. We can also work with you to add additional safety accessories as required and integrate these with your access control systems.

Ideal Application

- Commercial Properties
- Industrial Premises
- Car Parks
- Hospitals
- Airports
- Schools
