

## Static Bollards

High security fixed and removable bollards are the most cost-effective solution for preventing unauthorised vehicle access. These bollards have extensive footings that mean they can literally stop a truck! They are made from high-grade steel and tested to ASTM F2656, PAS68 and IWA 14-1 standards.

Hampden also offers a range of low security bollards to help manage vehicle access on or around your property. Bollards are available in both custom-steel and custom-timber and can be designed to suit the aesthetics of your site.

## Static Bollards

Bollards are an effective and unobtrusive way of separating people and vehicles or placing protection around vulnerable areas. Designed well, they will meet the competing needs of being secure and fitting in seamlessly with the environment. High security bollards don't need to be ugly - let us help you specify the right product.
